

## Australian Air Express

**Location** Brisbane Airport, QLD  
**Sector** Industrial  
**Value** \$8 million  
**Client** Australian Air Express

The Australian Air Express project included the construction of a 6,000 m<sup>2</sup> warehouse and logistics facility in addition to 2,000 m<sup>2</sup> of office space. The project is the second turnkey facility in five years constructed by De Luca for Australian Air Express.

The project features an airside concrete hardstand with anti-terrorism security installation and is a large open span design, maximising storage whilst maintaining cost effectiveness.

The building was designed with alternative fire solutions to achieve cost effective construction techniques, whilst maximising the buildings operable GFA. The construction programme was designed to work around the clients fit-out installation to allow the site to operate prior to practical completion.
